

Husky Energy Suspends West White Rose Project

Company takes immediate action to ensure the safety of Husky's workforce, construction sites and communities

Husky Energy today announced that it will begin a systematic and orderly suspension of major construction activities related to the West White Rose Project.

The decision reinforces Husky's objective to prevent the transmission of the COVID-19 virus among its employees, contractors and the community. The Company carefully assessed the risks and determined they could not be adequately mitigated for such a large construction workforce.

"We are taking the steps necessary to keep our people and our construction sites safe," said CEO Rob Peabody. "These are the right decisions for our people, their families and the community."

Husky is working cooperatively with its contractors to safely suspend all activities, and to demobilize and secure its construction sites.

Production from the White Rose field and its satellite extensions, located 350 kilometres off the coast of Newfoundland and Labrador, is continuing with enhanced workforce control measures introduced to ensure the ongoing safe operations on the *SeaRose* floating production, storage and offloading vessel.

Husky will provide a business and capital spending plan update in due course.
