As NATO allies increase investment in Arctic sovereignty, maritime security, and defence readiness, Port of Argentinia offers a strategic platform for operations in the North Atlantic.

From defending the Atlantic yesterday to supporting North Atlantic security today.

Selected as a strategic U.S. naval base during the Second World War, Port of Argentia has long played a role in North Atlantic security. Today, its deep-water, ice-free harbour, extensive marine infrastructure, and 9,000 acres of industrial lands provide the capacity to support defence operations, strategic logistics, vessel maintenance, and defence-related manufacturing. Positioned on the North Atlantic with unrestricted marine access and significant room for expansion, Argentia is a valuable asset for Canadian and allied defence initiatives.

Flexible Infrastructure

- Multiple deep-water berths
- Extensive laydown and staging areas
- Heavy-lift capability
- Secure marine access
- Room for future expansion

Industrial Scale

- 9,000 acres of privately owned industrial land
- Space for long-term growth and mission support
- Built to accommodate large-scale projects and operations

Strategic Location

- Direct access to Canadian and U.S. offshore, European markets, northern territories
- Access to 18 m depth dredged channel
- Close proximity to provincial skilled workforce

Ready Sooner

With one of the shortest project development timelines among Atlantic Canadian ports, Port of Argentia is ready to mobilize quickly to meet NATO demand and deliver projects on schedule.

High Impact, Low Investment

Requiring the least capital investment, Port of Argentia offers exceptional value and immediate potential for developers seeking efficiency and return on infrastructure.

Proven Performance

Port of Argentia has hands-on experience supporting major infrastructure projects and delivering industrial undertakings, including construction of the Concrete Gravity Structure (CGS) for the West White Rose Project — proof of its capability to execute complex, large-scale marine operations.
